Digital Literacy Project Report

Name: Harman Singh
Registration Number: 25BCE10077
Branch: B.Tech CSE CORE
Year: First Year
Course Code: CSE0001
Date: 27-03-2026

INTRODUCTION

This was a project concerning the creation of a Digital Literacy Portfolio due to me being a Student Digital Ambassador. The primary intention was to work out how to use tools in a responsible manner, how to use them well. I completed numerous activities in relation to this project such as creating an infographic, creating profiles experimenting with the platforms of learning how to code, learning the need to write good emails, learning about cybercrime awareness.

Everything I was doing assisted me in becoming knowledgeable about things and learning to use digital tools. I also improved my skills of presenting information in a professional manner. The Digital Literacy Portfolio project indeed allowed me to understand why digital literacy is of such significance both to school and to life. I have gained a lot, regarding literacy and the way it can be applied in various scenarios such as the Digital Literacy Portfolio.

TASK 1 - Create a Digital Literacy Awareness Infographic

Here, I have designed a literacy infographic in Canva. This infographic on digital literacy concerns literacy and such aspects as internet safety and some of the most really helpful digital classroom tools. I have ensured that the digital literacy infographic appears clean and easy to get what the digital literacy infographic is communicating.

According to the digital literacy infographic, digital literacy is concerned with the manner with which technology is used. I also added some precautionary measures such as using passwords that are difficult to get and clicking the links of which you do not have any idea. I also included that you should not leave your information in danger. I also included several tools to the digital literacy infographic such as Google Docs and GitHub and LinkedIn and Canva.

Displaying pictures and words in a manner that looks good when assembling the digital literacy infographic made me really think it was cool. An issue that was not easy was ensuring that the digital literacy infographic was not overcrowded and had too much data. Conducting this project allowed me to pick up a method of presenting information in an easily viewable and comprehensible form, which forms a large portion of digital literacy and learning about digital literacy.

TASK 2 - Build Your Student Digital Portfolio

In this task, I have updated my profiles on GitHub, LinkedIn and Kaggle.

- GitHub is the platform where I display my projects in code. I developed a profile README to inform others about me and my competencies.
- I use LinkedIn for write about myself and achievement I have made. I added my education details. Got my basic profile online.

- Kaggle is the place where I study and train in data skills. Such websites assist in developing my portfolio.

Within the four years I will put projects on my GitHub. To improve my LinkedIn profile, I will include achievements. I will also take Kaggle to become more proficient at problems and analysis. This assignment made me understand why it is worth being an online presence, in GitHub, LinkedIn and Kaggle.

Task 3 - Explore Coding & Collaboration Platforms

In this part of the assignment, I researched on tools of coding and collaboration. I completed an HackerRank certification of Python Basics. I have solved puzzles and gave a certification exam on object oriented computer programming and string transformation. This assisted me to become more adapt at coding and logical thinking.
I also created a Google Form that I named Digital literacy Awareness Quiz. It had five questions. They were some choice and some short answers. They put in test digital literacy knowledge. I created a connected Google spreadsheet to get responses as well.
These are useful learning tools as well as collaboration tools. HackerRank enhances coding learning and programming certification. And google forms will be good (in the case of quizzes and statistics gathering). This assignment enabled me to understand the use of these platforms in learning.

Task 4 - Draft a Professional Email & Etiquette Guide

I was working on a task about email communication. I had to write two emails one email was to a professor asking for some time to do something. The other email was to someone who helps with internships. I told them I am interested in working with the internship people.

I learned that it is really important to use a line in my email and be respectful. My email needs to be easy to understand so the person reading it knows what I want.

I made a list of things to do. Things not to do on social media. I found out that email communication is very important because mistakes when talking to people online can cause problems. Email communication is something I need to be good at when I'm using computers and phones. It is important at school and at work because people use email communication a lot. I need to be careful when I communicate with people online, through email communication.

Task 5 - Cybercrime Awareness Case Study & Prevention Guide

For Task 5, I researched UPI and online payment fraud, focusing on how easily college students can be targeted on second-hand marketplaces. What surprised me

the most was the psychological manipulation involved. Scammers do not necessarily hack into your device; instead, they socially engineer you into making the mistake yourself by creating a false sense of urgency or offering a deal that seems too good to pass up. I was shocked to learn how many people still believe they need to enter a UPI PIN to receive a payment or refund. As a direct result of this research, the one personal habit I will change immediately is my approach to public Wi-Fi. I will stop checking my bank balance or making online purchases while connected to open cafe or campus networks, and I will be far more vigilant about verifying UPI IDs before hitting send.

Conclusion

The project was so fruitful to me since I gained a lot concerning Digital literacy. The subject of the project was literacy. I believe literacy plays a super-important role in our lives. Examples include myself becoming more adapt at computer applications and making my online self attractive. I also knew how to converse with people in a manner when I am online.

I learned about safety too. I learned the whole thing that happens over the internet. The project instructed me on the significance of literacy and safety.
The project enabled me to make better use of computers. It taught me that whenever using computers I have to be responsible. This project taught me things concerning literacy. Literacy will support me on the one hand, during my studies and on the other hand, during the employment. Literacy is indeed significant in my future since literacy is the key, to success.
